

## Ordering system for a restaurant

The system should allow the customer to select the items, and add as many as they want, calculate the time for the order to be ready, calculate the total, and print the receipt.

List of items:

Item	Price	Discount	Preparation Time
Sandwich	\$10	10% if 5 or more are ordered	10 min.
Salad	\$8	10% if ordered with a soup	8 min.
Soup	\$6	20% if ordered with sandwich and salad	15 min.
Coffee/tea	\$5	N/A	5 min.

The receipt should be printed as shown:

\*\*\*\*\*

<Name>, thanks for your order

Items	qty	Price
Item 1	##	\$\$
Item 2	##	\$\$
Item 3	##	\$\$
Item 4	##	\$\$

Tax	\$\$
Total	\$\$\$

<Date>, Your order will be ready in <time>
